HYDRAULIC THUMBS

FEATURES

1 Thumb Body

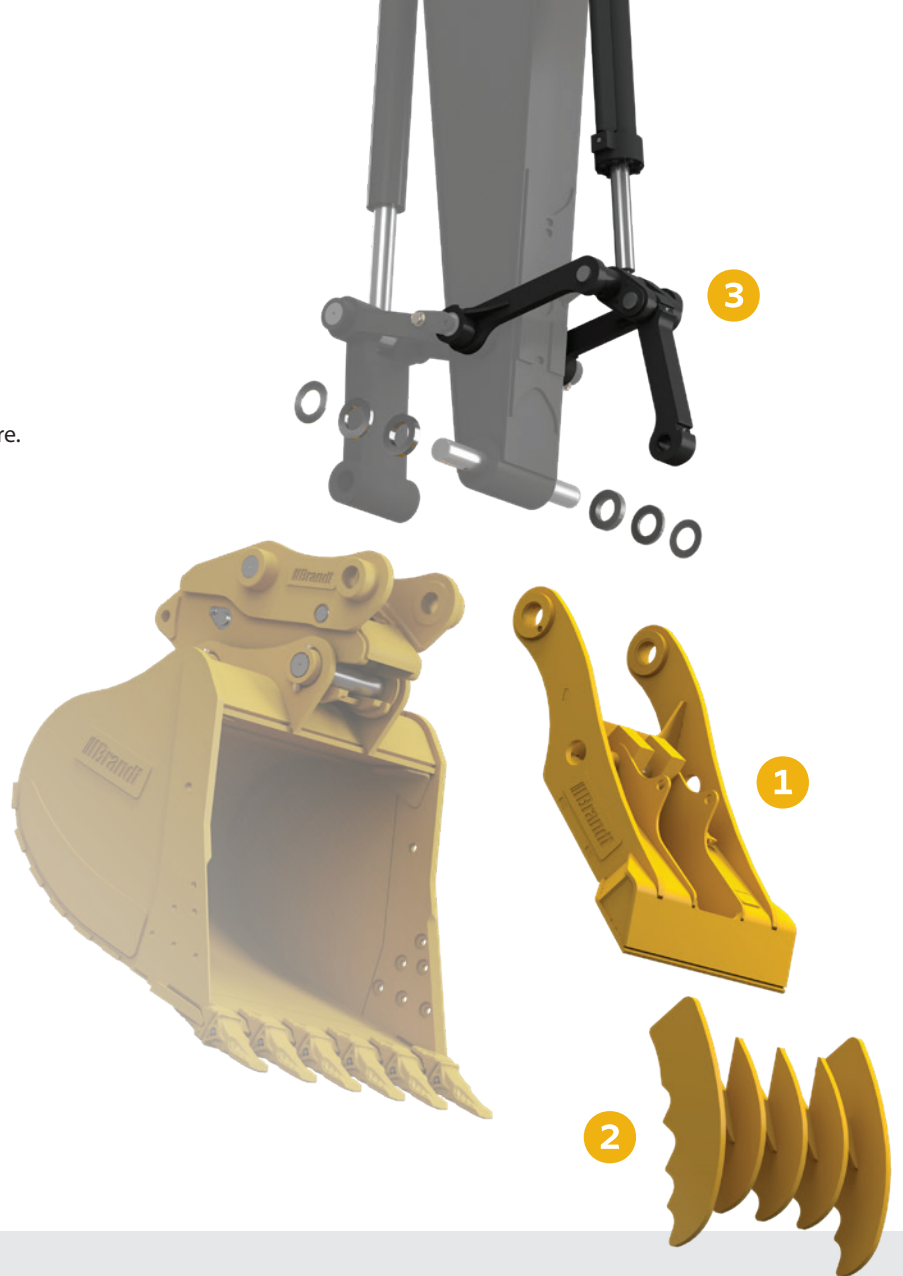

The main componentry of the thumb; this is needed for every thumb as it includes the body weldment, cylinder, main pivot pin, the anchor plate, and other misc. hardware.

2 Tine Kit

The most variable option, a tine kit will be specialized upon request. Pending on the number of tines needed, style of tine, and what coupler it is connecting too.

3 Progressive Link Kit

A standard direct link kit is provided, while a progressive link kit can be supplied upon request. Upgrade to the progressive link to increase your range of motion by 170° or more.

Versatility

Multiple tine configurations and styles (serrated, smooth, etc.) are available to complete a variety of jobs and effectively handle a wide range of different materials.

It is compatible with all JD spec'd attachments, so you can continue to get maximum value from the equipment you already own.

Durability

The slanted plate allows for torsion resistance and ease of welding on the tines.

This thumb is equipped with standard triangular gussets for added support to the tines, so you can tackle tough applications with no problems.

The body of the thumb is constructed of high-strength steel and the tines are made of abrasion-resistant steel to ensure durability and longevity.
