

LONG FRONT CONVERSIONS

Brandt Hard To The Core excavator long front conversions deliver the extra range and leverage that allow you to reach further and dig deeper than standard factory configurations. We know that there are times when you need more reach to get the job done, so we custom-engineered this unit to maximize the capabilities of your Deere excavator, delivering unmatched performance and safety in exceptional situations.

Features:

- Machined pin bores for precise fit and component longevity.
- Robust custom stick and tool cylinders, engineered to perform to your specialized requirements. The main factory boom cylinders are utilized.
- High quality paint to match OEM Deere color scheme.
- Complete FEA analysis, done on both boom and stick to ensure structural integrity.
- Custom long-reach-specific bucket ensures that your machine will perform to its full potential and operate within safe limits.
- Under-mount rear counterweight is included with the package. This weight has been engineered to match machine, bucket and reach for maximum efficiency.
- Centralized grease bank, located at the base of the boom, ensures that operators can efficiently grease all components from one location, significantly enhancing safety and ease of maintenance.
- Clean and protected hose routing up the length of the boom and stick ensures that critical components are secure, eliminating the risk of costly snags and damage during operation.
- Available in a full range of sizes, specifications and options. Brandt Hard To The Core attachments have earned their reputation as the toughest on earth; built to succeed in the most challenging conditions and optimized for your John Deere equipment.
