# Wheel Loader Mastless Snow Wing

## Piledriver.

The all-new mastless snow wing from Brandt delivers superior snow-clearing efficiency with the maneuverability of a wheel loader to plow through even the heaviest snowfalls. Use this snow wing with our front plow for a complete snow-clearing solution that delivers maximum performance.

### ① Productivity

This powerful attachment is purpose-built to make clearing more snow easier than ever:

- Twenty-inch bench height rises over curbs to make maneuvering in urban environments faster and easier.
- Conical blade profile delivers superior snow-casting ability, moving snow as far off the roadway as possible.
- Spring-trip cutting edges minimize snow-loss and protect wing components when plowing at higher speeds.
- Available in front- and mid-mount versions.

### ② Reliability

The snow wing is built tough to handle everything winter can dump on you:

- All pivot areas are made of high-strength wear-resistant material for added durability and longevity.
- Wing lift cylinder is connected to the front lift group and top of the wing moldboard to deliver superior lift.
- Internal ribs and external gussets provide the extra strength required to maximize attachment life, even in tough conditions.

### ③ Safety

The snow wing was designed with your safety in mind so you can work confidently:

- Mastless design gives the operator an unobstructed view of the clearing path, for best-in-class visibility.
- High-power dual relief valve reduces the strain on cylinders when coming into contact with an obstacle to protect the hydraulic system.
- Tighter turning radius of a wheel loader compared to a motor grader makes plowing city streets safer.

Powerful Value. **Delivered.**
