

HX120 Hydrovac

High-Pressure Performer.

The HX120 hydrovac from Brandt delivers the unmatched productivity and precision you depend on in urban settings and beyond. It takes the guesswork out of weight restrictions and delivers maximized road-legal loads, lower noise levels, and exceptional maneuverability in tight spaces.

More Productive

Achieve quicker loading and unloading times of measured debris and take on larger jobs without weight restrictions:

- Accurate real-time measurement of water and truck weight and lower tare weight allows operators to confidently push payload to the maximum to get the most out of every trip without risking costly fines.
- Engineered from the ground up with optimally sized components and plumbing that work in harmony to maximize digging performance and increase legal payloads.
- The debris tank unloads more quickly and completely than competitors and has the ability to pressure offload into another truck, bin, or land spread for fast turnaround.

2 More Uptime

The HX120 delivers unrivaled dependability, component reliability, and working hours:

- The full AR steel-constructed boom turret features an easily removable access plate for cleanout and shut-off plate that allows you to shut down the boom suction without having to shut down the blower.
- Industry-leading 28-foot boom features a progressive diameter from the dig tube to the turret, reducing plugging and acting as a secondary vacuum chamber that increases efficiency at the end of the hose.
- Easy access to service and maintenance points allow for quicker on-site servicing. And, remote sight glasses, grease lines, and oil drains save operators more time.

3 Lower Cost of Operation

The HX120 is purpose-built with features that reduce the need for repairs and improves the lifespan of components:

- The 4000 CFM blower is powered by an innovative dual power takeoff, pulling full performance capability and eliminating the need for a transfer case.
- Fully powder coated debris tank resists corrosion, sheds mud more efficiently and features a wear plate directly under the boom turret, extending the life of the debris tank.
- Pulls similar vacuum compared to competitors at much lower RPM – keeping the worksite quieter while burning less fuel.

Powerful Value. Delivered.

Brandt Equipment Solutions

HX120 Hydrovac

HX120 HYDROVAC FEATURES

Quietest-Running Truck

The Brandt-engineered vacuum system components minimize space requirements, increasing component performance and optimizing noise suppression. Enclosed cyclones, filter, and sheltered blower design greatly reduce noise.

Low Tare Weight

The lowest tare weight in this class of hydrovac maximizes payload of both road legal loads and loads without weight restrictions – making you more productive.

Payload Accuracy

4-point load cell system provides "class leading" real time measurement of debris, water and truck weight for extremely accurate legal load management.

Compact Design

The automatic transmission, low overall height, and compact wheelbase deliver superior maneuverability, making it easier to operate.

Simple and Reliable Marine-Grade Control Panels

The HX120 is equipped with multiple locations to operate work lights, activate hydraulics, and control the wash pump, saving the operator unnecessary trips around the unit. And, all functions are controllable directly from the work area.

Multiple Storage Cabinets

Quick access to tools on the driver, passenger, and rear sides (including the bumper) enables operators to work efficiently at the jobsite. And, a warming/ change cabinet allows operators to warm up or change out of wet work gear.

Cold Weather Package

Winter-friendly components ensure yearround operation in colder climates. Plus, the anti-freeze system, complete with recovery, allows outdoor parking without damaging the water pump and lines.

Boom Isolation Valve

Conveniently shut off the vacuum at the end of the hose without shutting down the blower.

Rear Door Safety Lockout

Market leading 28' boom reach

The rear-door safety lockout ensures safe servicing and allows operators to wash down the inside of the debris tank with ease. Plus, the system requires less water to wash out after unloading than competitor slope-unload designed units.

Wireless Controls

All functions appear on the main page for enhanced efficiency at the jobsite and the quick start feature enables operators to start excavating and adjust performance with the push of a button.

Top-Of-Tank Access Ladder

Independent grab points ensure easy access to the top of the tank with a progressive entry walkway and full-length non-slip area integrated into the top of the debris tank.

Optimized Water System

The optimum sized water pump and boiler provide increased efficiency and productivity with unmatched performance. Plus, the quick-fill poly water tanks save time and weight.
